Subject: 2m Repeater Antennas ?
To: ham-ant@ucsd.edu

Hi. We had been using a Hygain G-7 antenna. The antenna was
generating noise on the receive side of our repeater whenever
the transmitter was above 5 watts. We swapped the G-7 with
a ringo and the noise moved. So now we are looking at obtaining
a replacement. We have some information on colinear antennas.

I was wondering what type of antennas are recommended or a list
of ones to stay away from. We want something that will last
and not give us any more problems with noise.

The repeater is on 146.655 -.600 pl 107.2

Thanks for any replys. 73 de3 kf9cs in Appleton, wi

cul Mark
